Preface *page* xvii
Acknowledgements xix

1 Introduction 1
1.1 The role of MHD in fusion energy 1
1.1.1 The plasma pressure in a fusion reactor 1
1.1.2 The dimensionless pressure, β 4
1.1.3 A variety of fusion concepts 4
1.1.4 Structure of the textbook 5
1.2 Units 5
References 6
Further reading 6

2 The ideal MHD model 7
2.1 Introduction 7
2.2 Description of the model 8
2.3 Derivation of the ideal MHD model 12
2.3.1 Starting equations 12
2.3.2 Two-fluid equations 15
2.3.3 Low-frequency, long-wavelength, asymptotic expansions 18
2.3.4 The single-fluid equations 19
2.3.5 The ideal MHD limit 22
2.4 Region of validity 28
2.4.1 Overall criteria 28
2.4.2 Conservation of mass 30
2.4.3 Momentum equation 30
2.4.4 Energy equation 32
2.4.5 Ohm's law 33
2.4.6 Summary of validity conditions 34

Problems 36

3 General properties of ideal MHD 39
3.1 Introduction 39
3.2 Boundary conditions 39
3.2.1 Perfectly conducting wall 40
3.2.2 Insulating vacuum region 40
3.2.3 Plasma surrounded by external coils 43
3.3 Local conservation relations 45
3.3.1 Conservation of mass 45
3.3.2 Conservation of momentum 45
3.3.3 Conservation of energy 46
3.4 Global conservation laws 47
3.4.1 Perfectly conducting wall 48
3.4.2 Insulating vacuum region 49
3.4.3 Plasma surrounded by external coils 51
3.5 Conservation of flux: the "frozen-in field line" concept 51
3.6 Summary 54
Further reading 54
Problems 55

4 MHD equilibrium: general considerations 58
4.1 Introduction 58
4.2 Basic equilibrium equations 58
4.3 The virial theorem 59
4.4 The need for toroidicity 61
4.5 Flux surfaces 62
4.6 Surface quantities: basic plasma parameters and figures of merit 66
4.6.1 Fluxes and currents 66
4.6.2 Normalized plasma pressure, β 68
4.6.3 Kink safety factor, q_* 70
4.6.4 Rotational transform, ι, and the MHD safety factor, q 70
4.6.5 Summary 72
4.7 Equilibrium degrees of freedom 72
4.8 The basic problem of toroidal equilibrium 73
4.9 A single particle picture of toroidal equilibrium 78
4.10 Summary 80

Downloaded from Cambridge Books Online by IP 128.59.222.12 on Sat Dec 19 01:27:45 GMT 2015.

Problems 82

5 Equilibrium: one-dimensional configurations 85
5.1 Introduction 85
5.2 The θ-pinch 85
5.3 The Z-pinch 90
5.4 The general screw pinch 94
5.4.1 General properties 94
5.4.2 The parallel pinch 98
5.4.3 The perpendicular pinch 100
5.5 Inherently 1-D fusion configurations 102
5.5.1 The reversed field pinch 102
5.5.2 The low β ohmic tokamak 108
5.6 Summary 116
References 117
Further reading 117
Problems 117

6 Equilibrium: two-dimensional configurations 123
6.1 Introduction 123
6.2 Derivation of the Grad–Shafranov equation 124
6.2.1 The $\nabla \cdot \mathbf{B} = 0$ equation 124
6.2.2 Ampere's law 126
6.2.3 Momentum equation 126
6.3 Plasma parameters and figures of merit 128
6.3.1 Simple flux coordinates 128
6.3.2 The volume of a flux surface 130
6.3.3 The plasma beta 130
6.3.4 The kink safety factor 131
6.3.5 Rotational transform and the MHD safety factor 131
6.3.6 The MHD safety factor on axis 132
6.3.7 Alternate choices for $F(\psi)$ 134
6.4 Analytic solution in the limit $\varepsilon \ll 1$ and $\beta_p \sim 1$ 136
6.4.1 The coordinate transformation 137
6.4.2 The asymptotic expansion 138
6.4.3 The ε^0 equation: radial pressure balance 139
6.4.4 The ε^1 equation: toroidal force balance 140
6.4.5 Application to early reversed field pinches (RFP) 142

Downloaded from Cambridge Books Online by IP 128.59.222.12 on Sat Dec 19 01:27:45 GMT 2015.

6.4.6 Application to early ohmic tokamaks and modern reversed field pinches 144
6.4.7 Summary 151
6.5 Analytic solution in the limit $\varepsilon \ll 1$ and $\beta_p \sim 1/\varepsilon$ (the high β tokamak) 152
6.5.1 The high β tokamak expansion 153
6.5.2 The circular high β tokamak 154
6.5.3 The flux conserving tokamak – avoiding the equilibrium β limit 164
6.5.4 The elliptic high β tokamak 171
6.6 Exact solutions to the Grad–Shafranov equation (standard and spherical tokamaks) 176
6.6.1 Mathematical formulation 177
6.6.2 Examples: TFTR and JET 182
6.6.3 Example: the spherical tokamak (ST) 183
6.6.4 The equilibrium β limit 187
6.6.5 Up–down asymmetric solutions 189
6.6.6 Example: the International Thermonuclear Experimental Reactor (ITER) 192
6.6.7 Example: the National Spherical Torus Experiment (NSTX) 194
6.6.8 Summary 195
6.7 The helical Grad–Shafranov equation (the straight stellarator) 196
6.7.1 Overview 196
6.7.2 The helical Grad–Shafranov equation 197
6.7.3 Low β analytic solution 199
6.7.4 The rotational transform 207
6.7.5 Summary 209
6.8 Overall summary 210
References 213
Further reading 213
Problems 215

7 Equilibrium: three-dimensional configurations 223
7.1 Introduction 223
7.2 The high β stellarator expansion 226
7.2.1 Introduction 226
7.2.2 The basic equations 227
7.2.3 The high β stellarator expansion 228
7.2.4 Reduction of the equations 230

Downloaded from Cambridge Books Online by IP 128.59.222.12 on Sat Dec 19 01:27:45 GMT 2015.

7.3 Relation of the high β stellarator expansion to other models 236
7.3.1 The high β tokamak 237
7.3.2 The straight stellarator 237
7.4 The Greene–Johnson limit 240
7.4.1 Comparison of expansions 240
7.4.2 The Greene–Johnson limit of the HBS model 241
7.4.3 The Greene–Johnson model 243
7.4.4 Summary 244
7.5 Vacuum flux surfaces 244
7.5.1 Single helicity – the limiting helical field amplitude 244
7.5.2 Multiple helicity stellarators 249
7.6 Effects of finite β 251
7.6.1 Low β single helicity solutions 253
7.6.2 Toroidal force balance in a current-free stellarator 257
7.6.3 How does a vertical field shift a stellarator with no net current? 262
7.6.4 The equilibrium β limit in a stellarator 269
7.6.5 The flux conserving stellarator 273
7.6.6 Multiple helicity, finite β stellarators 275
7.7 Neoclassical transport in stellarators 277
7.7.1 Review of transport in a tokamak 278
7.7.2 The problem with neoclassical transport in a stellarator 282
7.7.3 One solution – the omnigenous stellarator 287
7.7.4 The isodynamic stellarator 292
7.7.5 The symmetric stellarator 297
7.7.6 Boozer coordinates 307
7.7.7 Summary of neoclassical transport in a stellarator 318
7.8 Modern stellarators 319
7.8.1 The Large Helical Device (LHD) 319
7.8.2 The Wendelstein 7-X (W7-X) stellarator 321
7.9 Overall summary 323

Problems 325

8 MHD stability – general considerations 327
8.1 Introduction 327
8.2 Definition of MHD stability 328
8.3 Waves in an infinite homogeneous plasma 330

Downloaded from Cambridge Books Online by IP 128.59.222.12 on Sat Dec 19 01:27:45 GMT 2015.
http://ebooks.cambridge.org/ebook.jsf?bid=CBO9780511795046
Cambridge Books Online © Cambridge University Press, 2015

8.3.1 The shear Alfven wave 332
8.3.2 The fast magnetosonic wave 332
8.3.3 The slow magnetosonic wave 333
8.3.4 Summary 334
8.4 General linearized stability equations 334
8.4.1 Initial value formulation 334
8.4.2 Normal mode formulation 336
8.5 Properties of the force operator $\mathbf{F}(\boldsymbol{\xi})$ 337
8.5.1 Self-adjointness of $\mathbf{F}(\boldsymbol{\xi})$ 337
8.5.2 The "standard form" of δW 338
8.5.3 The "intuitive form" of δW 340
8.5.4 The "intuitive self-adjoint form" of δW 342
8.5.5 Real ω^2 344
8.5.6 Orthogonality of the normal modes 345
8.5.7 Spectrum of $\mathbf{F}(\boldsymbol{\xi})$ 345
8.6 Variational formulation 347
8.7 The Energy Principle 349
8.7.1 Statement of the Energy Principle 350
8.7.2 Proof of the Energy Principle 351
8.7.3 Advantages of the Energy Principle 354
8.8 The Extended Energy Principle 355
8.8.1 Statement of the problem 356
8.8.2 The boundary conditions 356
8.8.3 The natural boundary condition 358
8.8.4 The surface energy 359
8.8.5 The vacuum energy 360
8.8.6 Summary of the Extended Energy Principle 362
8.9 Incompressibility 363
8.9.1 The general minimizing condition 363
8.9.2 Ergodic systems 364
8.9.3 Closed line systems 365
8.9.4 Summary and discussion 366
8.10 Vacuum versus force-free plasma 367
8.10.1 The nature of the problem 367
8.10.2 Vacuum vs. force-free plasma: the same results 367
8.10.3 Vacuum vs. force-free plasma: different results 368
8.10.4 The real situation: a resistive region 368
8.11 Classification of MHD instabilities 369
8.11.1 Internal/fixed boundary modes 370
8.11.2 External/free boundary modes 370

Downloaded from Cambridge Books Online by IP 128.59.222.12 on Sat Dec 19 01:27:45 GMT 2015.

Problems 377

9 Alternate MHD models 381
9.1 Introduction 381
9.2 Transition from collision dominated to collisionless regimes 382
9.3 General formulation 384
9.4 Ideal MHD closure 385
9.5 Kinetic MHD 385
9.5.1 Basic assumptions 385
9.5.2 Derivation of the kinetic MHD model 386
9.6 The Chew, Goldberger, Low (CGL) double adiabatic model 391
9.6.1 Formulation of the problem 392
9.6.2 Derivation of the double adiabatic model 393
9.6.3 The modified double adiabatic model 395
9.7 Summary 396
9.7.1 Ideal MHD 396
9.7.2 Kinetic MHD 396
9.7.3 The double adiabatic model 397
References 398
Further reading 398
Problems 398

10 MHD stability comparison theorems 400
10.1 Introduction 400
10.2 Ideal MHD equilibrium and stability 401
10.3 Double adiabatic MHD equilibrium and stability 402
10.3.1 Relation between the perturbed quantities and $\boldsymbol{\xi}$ 403
10.3.2 The double adiabatic MHD Energy Principle 404
10.3.3 Summary of CGL stability 406
10.4 Kinetic MHD equilibrium and stability 406
10.4.1 Equilibrium 407
10.4.2 Stability of a closed line cylindrical system 408
10.4.3 Stability of an ergodic cylindrical system 411
10.4.4 Stability of a general toroidal configuration 414
10.5 Stability comparison theorems 422
10.5.1 Closed line cylindrical geometry 422

Downloaded from Cambridge Books Online by IP 128.59.222.12 on Sat Dec 19 01:27:45 GMT 2015.

Cambridge Books Online © Cambridge University Press, 2015

10.5.2 Ergodic cylindrical geometry 423
10.5.3 Closed line toroidal geometry 424
10.5.4 Ergodic toroidal geometry 425
10.6 Summary 426
References 427
Further reading 427
Problems 427

11 Stability: one-dimensional configurations 428
11.1 Introduction 428
11.2 The basic stability equations 430
11.2.1 The Energy Principle 430
11.2.2 The normal mode eigenvalue equations 430
11.2.3 Incompressible MHD 431
11.3 Stability of the θ-pinch 431
11.3.1 Application of the Energy Principle to the θ-pinch 432
11.3.2 Minimizing δW_F for a θ-pinch 433
11.3.3 Continuum damping in a "slab" θ-pinch 434
11.4 Stability of the Z-pinch 443
11.4.1 Energy Principle analysis of $m \neq 0$ modes 444
11.4.2 Energy Principle analysis of the $m = 0$ mode 447
11.4.3 Double adiabatic Energy Principle analysis of the $m = 0$ mode 450
11.4.4 The hard-core Z-pinch 452
11.5 General stability properties of the screw pinch 458
11.5.1 Evaluation of δW for a general screw pinch 459
11.5.2 Suydam's criterion 465
11.5.3 Newcomb's procedure 470
11.5.4 The normal mode eigenvalue equation 477
11.5.5 The oscillation theorem 482
11.5.6 The resistive wall mode 486
11.6 The "straight" tokamak 494
11.6.1 Reduction of δW for the straight tokamak 495
11.6.2 Sawtooth oscillations – the internal $m = 1$ mode 497
11.6.3 Current-driven disruptions – external low m modes 500
11.6.4 Density-driven disruptions – external low m modes 512
11.6.5 Resistive wall modes – external low m modes 518
11.6.6 Edge localized modes (ELMs) – external high m modes 519
11.6.7 Summary of the straight tokamak 527

11.7 The reversed field pinch (RFP) 529
11.7.1 Physical parameters describing an RFP 530
11.7.2 Instability of an RFP without a B_z reversal 532
11.7.3 The $m = 0$ instability 534
11.7.4 Suydam's criterion 535
11.7.5 Internal modes 537
11.7.6 Taylor's theory 538
11.7.7 Ideal external modes 552
11.7.8 Overview of the RFP 557
11.8 Summary 558

Further reading 562
Problems 563

12 Stability: multi-dimensional configurations 570
12.1 Introduction 570
12.2 Ballooning and interchange instabilities 572
12.2.1 Introduction 572
12.2.2 Shear, periodicity, and localization 574
12.2.3 General reduction of δW for ballooning modes 578
12.3 The ballooning mode equations for tokamaks 581
12.4 The ballooning mode equation for stellarators 585
12.5 Stability of tokamaks – the Mercier criterion 588
12.5.1 Introduction 588
12.5.2 Cylindrical limit: the Suydam criterion 589
12.5.3 Toroidal geometry: the Mercier criterion 591
12.5.4 Analytic limits of the Mercier criterion 596
12.5.5 Summary 598
12.6 Stability of tokamaks – ballooning modes 598
12.6.1 Introduction 598
12.6.2 The s–α model for ballooning modes 599
12.6.3 β limits due to ballooning modes 605
12.6.4 Summary 608
12.7 Stability of tokamaks – low n internal modes 608
12.7.1 Introduction 608
12.7.2 Low n internal modes with finite shear 609
12.7.3 Low n internal modes with small shear 610
12.7.4 Summary 611
12.8 Stability of tokamaks – low n external ballooning-kink modes 611
12.8.1 Introduction 611

Downloaded from Cambridge Books Online by IP 128.59.222.12 on Sat Dec 19 01:27:45 GMT 2015.
